

INTRODUCING

# Hippo Virtual Care

*Redefining the healthcare experience*

Hippo Technologies is revolutionizing the world of virtual care. We are a clinician-led company bringing a combination of global medical practice and next generation technologies to transcend conventional boundaries of distance, time and training to serve patients and those who care for them.

Our Hippo Virtual Care platform [HVC] bridges the gap between physical care and virtual care, enabling healthcare providers and educators to overcome the barriers of time, distance and training to deliver all the benefits of an in-person experience through the safety of remote care.

Our hands-free, voice-activated, head-worn tablet allows clinicians to communicate in real-time with remote colleagues, pull up medical records, and automatically access files and imaging during patient examinations, procedures, consults and rounding.

Through our fully-integrated platform, we are able to deliver expert, specialist care and medical education when and where it's needed most, improving access, optimizing safety, and increasing efficiency.

### OPTIMIZE SAFETY

Hippo optimizes safety and convenience by reducing exposure to clinical teams working on complex patients in isolation zones. Our platform also improves patient safety by deploying the right expertise at the right time and enhancing the quality of care.

### SCALE EXPERTISE

Hippo allows you to dramatically scale healthcare expertise and increase the size and reach of the delivery system. We help extend the capabilities of the available workforce, turning any clinician with a headset into a virtual specialist.

### INCREASE PRODUCTIVITY

Hippo represents a paradigm shift in clinical workflow, enabling faster triage, smarter clinical decision making, and effectively reducing physician burnout through collaborative working.

### **Quick to deploy**

Plug and play installation with remote set-up, training and ongoing support.

### **Easy to use**

The headset is 100% hands free and comes with an intuitive interface and advanced voice activated technology that is accurate even in noisy environments, allowing you to seamlessly navigate between applications.

### **Durable and resilient**

Dust-proof and waterproof rugged design, the headset can survive a 2m drop test onto concrete. Rechargeable batteries can provide continuous service for 12-hour shifts.

### **Fully networked**

Wifi and bluetooth enabled, as well as LTE and 5G compatible, Hippo can integrate seamlessly with any hospital system and connected device.

### **Safe and secure**

The headset works with PPE safety glasses, face masks and goggles and can be easily disinfected with alcohol spray. The HVC platform is fully HIPAA compliant with state-of-the-art encryption and advanced security features.

### **Scalable and future-proofed**

The HVC platform includes open APIs allowing for a range of third party applications to integrate into our system. We already have more than 28 modules in development, ranging from AI-driven clinical decision support tools to Augmented Reality training.

---

**Combining utility, versatility and usability, the Hippo Virtual Care platform (HVC) has been built from the ground up by a global team of medical experts, with end users (clinicians and their patients) at the center of our solution design.**

## HIPPO IN THE FIELD

Now first responders to a trauma scene such as paramedics and emergency medical technicians can get expert advice from specialists back in the ER, enabling potentially life-saving instructions to be delivered in real-time, and faster triage on arrival.

## HIPPO IN THE HOSPITAL

Hippo addresses the COVID-19 era challenges of social distancing and clinical staffing shortages in the hospital. No need to scrub and wear PPE to deliver an emergency consult in an isolation zone – Hippo provides a first-hand view of the patient enabling specialists to consult directly with the treating physician.

## HIPPO IN THE CLASSROOM

Convening medical students and faculty at a central location is expensive under normal conditions and impossible at present due to COVID-19 restrictions. The HVC platform can be used for ongoing skills training and assessment and allows for remote proctoring, evaluation and calibration of procedures and skills.

## HIPPO IN THE HOME

Hippo brings a new dimension to telehealth in the home, allowing a caregiver to be guided by a specialist when caring for a patient at home, such as postoperative care, IV infusions, or complex disease management. Bluetooth-enabled peripheral devices allow for real-time transmission of key biometric data directly to the attending clinician.

**Hippo allows us to practice medicine as we were trained.”**

“I immediately saw the application for using this technology to enhance the learning, practice and improvement of healthcare. The ability to have audio/visual communication for peer-to-peer consultation and collaboration, not to mention teaching and proctoring with junior colleagues became crucial during COVID-19. The Intensivists in the ICU immediately embraced the new technology and are now using it as part of their daily rounds. The hands-free aspect is a real benefit – it allows us to practice medicine as we were trained. So many existing tele-devices are on a cart or fixed to a wall. With Hippo, I can orient a patient or see a procedure as if I was physically in the exam room.”

**Thomas Matthew, MD**

Director, Johns Hopkins Cardiothoracic Surgery Program at Suburban Hospital
